Gold Secure LMS Hosting *with* *Data Encryption 'at REST'*

Introduction

Secure LMS Hosting is **included with all Axis LMS plans.** The security, backup and data center benefits that come with the *Secure LMS Hosting* is beyond what most of our competitors offer, and is more than enough security for most clients.

If you have more stringent security needs or are a government entity, we offer the *Gold Secure LMS Hosting* package which adds several additional security features to your hosted Axis LMS system.

In addition to everything included in the standard *Secure LMS Hosting,* here is what *Gold Secure LMS Hosting* adds:

Gold Secure LMS Hosting

- PCI Compliant

- Data encryption at REST

- External <u>off-site</u> backup storage retained for up to 30 days and include backups for the past 7 days, along with 4 weekly backups

- Additional Cisco hardware firewall in front of the already included 2 firewalls with standard Secure LMS Hosting package

- Fully managed Intrusion Detection System (IDS)

- Anomaly investigation and detection

- Real-time system and file integrity monitoring

- Network activity monitoring

- Advanced DDoS Attack protections

- Advanced server hardening

- Monthly external vulnerability scans

Note these features and benefits are **in addition to** the standard *Secure LMS Hosting* features and benefits.
